SILECTE™
QUANTUM DISINFECTION

WATER TREATMENT PROFESSIONALS PROVIDE THEIR CUSTOMERS WITH NOTHING BUT THE BEST!

SILECTE KILLS BACTERIA THAT FORMS IN RO TANKS INSTANTLY UPON CONTACT!

There is no doubt that the installation of a POU water treatment, such as a reverse osmosis system presents an opportunity for re-growth of the bacteria present in the influent water. This has been demonstrated in many studies over the years and the growth of heterotrophic bacteria (HPC) in a reverse osmosis tank is real and fungible. The important question with regard to this re-growth is with respect to the potential role of the bacteria in human disease. The fact is, most healthy individuals are not bothered by heterotrophic bacteria – it's the infants, elderly, immune-compromised and individuals with certain maladies such as autism who are impacted.

INSIDE SILECTE INLINE

REPLACE YOUR FINAL RO POLISHING FILTER AND MAKE YOUR RO A BACTERIA KILLING MACHINE.

"It's one of the easiest products I have ever sold. As soon as I mention it most customers immediately want it. They just seem to understand. I sell the Silecte Quantum Disinfection Cartridge with nearly every filter pack now." --Travis O'Meara
