

Quantum disinfection kills bacteria at the cellular level. Silecte™ is the world's only disinfectant media that kills 100% of micro-organisms with no chemicals. It uses micro-beads ionically charged to kill infectious bacteria in just 0.01 seconds. Currently being deployed in water and wastewater reclamation, we have tested it in water bottles and RO filters with extraordinary results.

The EPA has tested it and found it to be non-leaching. In fact, the EPA has established a CREDA for Silecte™. Currently, Silecte™ is in the final stages of Certification by NSF and such Certification is expected in Mid-August. This is now the new standard by which all disinfection processes can be judged.

<i>Silecte™ X3-1</i>	The World's ONLY Disinfection Media! 99.99% to 99.999% Kill!	<i>Silecte™ X3-10</i>
 <p>Inline GAC Cartridge with Silecte™ Media provides 4 to 5 log reduction of bacteria in water supplies. System 1 is designed for reverse osmosis post-filters or other drinking water applications.</p>		 <p>NSF Certified Filter Housing with Silecte™ Media provides 4 to 5 log reduction of bacteria in water supplies. System 10 has no pre-filtration. Pre-filtration is always recommended for best operation.</p>
